Discover all the secrets of space with the new Lexibook® Planetarium Projector!

A fun and educational planetarium to discover and learn all about planets and stars.

The planetarium is 2-in-1 and projects the constellations through 360° for a real light show! Two constellation domes are provided, to observe the stars of the northern and southern hemispheres and learn how to recognize the different constellations. The projector works on all suitable surfaces. Whether onto walls or ceilings, it projects fantastic images of galaxies, constellations or space rockets.

An ingenious skyrocket-shaped design!

The planetarium rotates to switch between constellation projection mode and image projection mode. Three discs are provided showing different themes in space. The first disc allows you to discover the planets, the second to learn about the major milestones in the conquest of space, and the third to become a space geek! In total there are more than 24 images of spaceships, planets, nebulae, moons, and galaxies! Simply turn the disc to change the image !

A learning booklet to become space savvy.

A booklet on space and a constellations map are both included, so you can learn to identify planets and constellations, discover anecdotes about space discovery, and enrich your knowledge!

A convenient and easy to use planetarium.

This planetarium is easy to use and adapts to its environment: the projection is adjustable thanks to an integrated focal ring and the adjustable projection angle.

In addition, there is a compartment on the base of the planetarium to store the discs after use!

Reference: NLJ180

RRP: 29,99€ / Available from October 2020
